

CLIMATOLOGICAL DATA FOR SEPTEMBER, 1912.

DISTRICT NO. 9, COLORADO VALLEY.

FREDERICK H. BRANDENBURG, District Editor.

GENERAL SUMMARY.

The month was marked by the general absence of the stability in pressure common to September; in fact, conditions resembled those that occur a month later. Low pressure in southern districts predominated, favoring the southward movement of anticyclonic areas, of which a number appeared at short intervals in the north. As the general drift of air was from northerly regions, the weather was unusually cold. The entire district was affected and mean temperatures were the lowest of record for September. Destructive frosts brought the growing season, which was one of the shortest in years, to an abrupt close generally about a month earlier than usual for most crops in the central part of the district, while damaging frosts occurred in New Mexico and freezing weather in the northern half of Arizona, except in the extreme west. Marked departures from the average also occurred in connection with the precipitation, the month having been one of the driest Septembers in many years, thus making the unusual combination of a cold and dry month. In Arizona the average precipitation was the least since 1892. While the dry weather was favorable to the proper curing of grass on the ranges, there was a scarcity of water for stock in localities toward the end of the month.

TEMPERATURE.

The mean of the 144 stations reporting was 60.6°, or 4.7° below the normal. The mean for September, 1911, was 67.2°. The highest monthly mean was 86.2° at Mohawk Summit, Ariz., and the lowest, 30.8°, at Corona, Colo. The first half of the month in Arizona was colder than the average, the deficiency being marked on a number of days; the latter half, however, was generally somewhat warmer than the normal. In the remainder of the district, except 2 or 3 days, the weather was cold, and daily deficiencies of 10° or more were not uncommon, the deficiency reaching 24° at Grand Junction, Colo., on the 15th. The highest temperatures in Arizona occurred principally on the 18th or 19th, but in the remainder of the district they generally occurred in the first decade. Ninety degrees or higher was recorded at several stations in Utah and New Mexico and at the majority of stations in Arizona. The lowest temperatures occurred generally on the 21st-23d. Freezing occurred at all stations in Wyoming, and at all but one or two stations in Colorado and Utah, and at a number of stations in New Mexico and Arizona. The highest temperature, 110°, occurred at Mohawk Summit, Ariz., on the 13th, and the lowest, 8°, at Corona, Colo., on the 21st.

Details of temperature are summarized in the following table:

Areas of States in district No. 9.	Temperature.					
	Mean.	Departure from normal.	Highest.	Station.	Lowest.	Station.
Western Wyoming.	44.8	-3.6	84	Green River.....	10	Bigpiney.
Western Colorado.	50.0	-6.5	87	At 2 stations.....	8	Corona.
Eastern Utah.....	54.6	-5.5	98	Price.....	10	Strawberry Tunnel (east). Dulce.
Western New Mexico.	59.9	-4.7	98	Rodeo.....	11	Dulce.
Arizona.....	69.7	-3.7	110	Mohawk Summit..	11	Flagstaff No. 1.
Southeastern Nevada.	65.2	98	Logan.....	28	Caliente.

PRECIPITATION.

The average for the 207 stations reporting was 0.52 inch, or 0.84 inch below the normal. The average for September, 1911, was 2.25 inches. While there were only 2 days without precipitation, the amounts were small, an inch or more falling only at 11 stations, 5 in New Mexico and 6 in Arizona. The showers occurred principally in the first half of the month, although somewhat general in Colorado on the 23d and 24th, and in Arizona on the 29th and 30th. The greatest monthly amount was 3.91 inches at Corona, Colo., while none occurred at 1 station in western Colorado, 4 in eastern Utah, 7 in western New Mexico, 14 in Arizona, and 2 in southeastern Nevada. No snowfall was reported from New Mexico, Arizona, and southeastern Nevada, but falls of 10 inches or more occurred at 9 stations in Colorado, with the maximum, 23 inches, at Corona.

The average number of days with 0.01 inch or more precipitation was 4 in western Wyoming and western Colorado, 2 in eastern Utah and western New Mexico, 1 in Arizona, and no day in southeastern Nevada.

The average precipitation and departures from the normal on the different watersheds are given in the following table:

Watershed.

Green.		Grand.		San Juan.		Little Colorado.		Gila.		Mimbres.		Colorado proper.	
Average.	Departure.	Average.	Departure.	Average.	Departure.	Average.	Departure.	Average.	Departure.	Average.	Departure.	Average.	Departure.
0.81	-0.73	0.89	-0.82	0.33	-1.16	0.25	-0.88	0.43	-0.79	0.73	-1.04	0.17	-0.72

MISCELLANEOUS.

The average amount of sunshine was from 3 to 8 per cent above the normal. The following are the values: Grand Junction, 79; Durango, 90; Phoenix, 94; and Yuma, 97 per cent.

The relative humidity reported was as follows: Grand Junction, 48; Durango, 52; Phoenix, 34; and Yuma, 40 per cent.
